

The Enterprise Layer Missing from Every AI Agent

AI agents promise to transform the way we work, but most never make it past the pilot.

WHY ARE AGENTS FAILING TO SCALE IN ENTERPRISES?

MCP has emerged as the standard for how AI agents discover and use tools. But MCP alone can't bridge the gap between experimental AI and production-ready enterprise automation.

Limited Context

Agents see one app or database at a time, and never the complete picture of your systems, workflows and real-time data needed to make smart decisions.

Poor Security and Transparency

Agents operate without proper security controls, audit trails, or governance, creating serious security risks for enterprise deployment.

Inconsistent Output

Agents give different answers to the same question every time. Without business logic and error handling, they just aren't dependable enough for mission-critical work.

Workato Enterprise MCP delivers the **context, trust and accuracy** AI agents need to act effectively across your enterprise.

Complete Context

Connect your CRM, ERP, HR systems, and databases as unified tools that give agents your full operational picture—not isolated data silos.

Enterprise Security

Built-in governance, audit trails, and access controls that meet your compliance requirements from day one.

Reliable Execution

Business logic and error handling ensure consistent, accurate results you can trust for critical business processes.

It works with your existing infrastructure. No rip-and-replace. Just enterprise-grade capabilities that make your AI agents actually work.

Enterprise-grade features built for SaaS-scale challenges

Unlike generic MCP implementations or DIY solutions, Workato Enterprise MCP delivers the full power of enterprise integration, automation, and governance (not just protocol support). With 1,200+ pre-built connectors, one-click API-to-MCP conversion, and zero operational overhead, you get enterprise capabilities without enterprise complexity.

900k

workflow templates

DIY MCP	Workato Enterprise MCP
Protocol compatibility only	Full orchestration, security, governance
Direct API wrappers	Rich, composable business actions
DIY infrastructure	Fully-managed, production-grade hosting
Limited to single-app connections	Connects to 10,000+ enterprise systems
No built-in governance	RBAC, audit trails, compliance automation
Fragile, hard-coded workflows	Adaptive, context-aware orchestration

“Governance and controls are important considerations when implementing AI-powered functions, and Canva has already invested in that area. Model context protocol (MCP) is currently a big thing and offers some value, but Workato lets users build a customised MCP server that incorporates a knowledge graph and enterprise governance.

MICHAEL DENARI
HEAD OF IT AT CANVA

“Workato Enterprise MCP allows us to connect our AI agents to the enterprise systems and data our customers rely on. Before, those agents operated in silos. But with MCP, we can unlock richer insights, deliver more intelligent experiences, and focus our efforts on driving innovation.”

LEANDRO MORELATO,
SENIOR FULL STACK DEVELOPER AT TRUSTARC
